B) Function declaration can be hoisted

6. What is a correct example of an anonymous function?

B) var greet = function(){}

7. How do you execute a function expression stored in a variable `sayHi`?

B) sayHi()

8. Which of the following will throw an error?

B) greet() before declaration using `var greet = function(){}`

9. What is the output of the following?

```
sayHello();
```

```
var sayHello = function(){ console.log('Hello'); }
```

C) TypeError

10. Arrow functions were introduced in which ECMAScript version?

B) ES6

11. Which of the following is a valid arrow function?

A) ()=>console.log('Hi') C) ()=>{return console.log('Hi')} D) Both A and C

12. Arrow functions are also known as:

B) Anonymous Functions C

13. Arrow functions automatically return the value when:

B) Used without curly braces

14. Find the output:

```
let add = (a,b)=>a+b;
```

```
console.log(add(2,3));
```

B) 5

15. Which of the following is not true about arrow functions?

A) They have their own `this` context

16. What is the correct syntax for an IIFE (Immediately Invoked Function Expression)?

B) (function(){})();

17. Why do developers use **IIFE**?

A) To create private scope

18. Find the output:

```
(function(){ console.log('IIFE runs!'); })();
```

C) Prints 'IIFE runs!'

19. Which one executes immediately after defining?

D) IIFE

20. What is the main characteristic of an anonymous function?

B) Has no name

21. Which of the following correctly defines and calls an IIFE arrow function?

A) (()=>{console.log('Hi')}})();

22. What is the output?

```
(function(a,b){ console.log(a*b); })(2,3);
```

A) 6

23. What happens if you call a function without parentheses?

B) Returns the function reference

24. Which of the following defines a single-line arrow function returning 'Hello'?

A) ()=> 'Hello'

25. Which function type allows hoisting?

A) Function Declaration

26. Which of the following is true about IIFE?

B) It runs automatically once defined

27. What will be printed?

```
(function(){ var x = 10; })();
```

```
console.log(x);
```

C) ReferenceError

28. Arrow functions cannot be used as:

B) Constructors

29. Which of the following best defines a function expression?

B) let test = function(){}

30. Find the output:

```
let greet = ()=>{return 'Hi'};
```

```
console.log(typeof greet);
```

C) function
